

MASTER'S CERTIFICATE IN PROJECT MANAGEMENT

This five (5) seminar certificate program focuses on the PMBOK® knowledge areas, including their associated processes, tools, and techniques, that are essential for more effective management of organizations' projects, including:

- A Practical Approach of Planning & Controlling Projects
- A Practical Approach to Project Risk Management
- A Practical Approach to Project Quality Management
- A Practical Approach to Project Procurement & Contract Management
- A Practical Approach to Project Communications Management

The titles of these highly interactive seminars all begin with “A Practical Approach to . . .”, because seminar attendees are introduced to practical processes/tools/techniques that have been proven to support more effective management of projects. Furthermore, seminar attendees are provided the opportunity to put the key tools/techniques to practice via “hands-on” exercises and scenarios. In other words, the attendees get to take the tools/techniques presented for a “test ride” before taking them back to their workplace and applying them on-the-job.

In addition, seminar attendees are provided templates of all project management tools/techniques that are introduced or applied during these seminars. Many of the individuals/organizations who attend our seminars adopt/adapt these templates as their standards for application on their own projects or within their organization's portfolio of projects.
